Re: Evaluation of Cigarettes for Off Flavor

On November 15, 1967, we received test cigarettes from three separate experiments evaluating certain chemicals for nematode control. These experiments were conducted by Professor Todd at North Carolina State University, and the cigarettes were submitted by Mr. Ivan Neas, Agricultural Research Department. It is our understanding, after talking with Mr. Neas, that the evaluation is to be made in respect to off flavor and aroma in the tobacco. Therefore, the tobacco qualities weren't evaluated. Treated samples 2, 3, 4, and 5 were compared with the untreated check number 1. Samples 8, 9, and 10 were compared with the untreated number 6; and 15, 16, 17, and 18 were compared with the untreated check sample number 14.

Treated Sample No.
