October 2, 1986

Dr. George A. W. Waterhouse
Staff Toxicologist
Hazleton Laboratories
9300 Leesburg Turnpike
Vienna, VA 22180

Dear George:

This letter is to confirm your conversation with T. A. Vollmuth on October 1, 1986 in which we gave verbal authorization to cancel scheduled testing on material B207 which was submitted on September 23, 1986 for the 14-Day Subacute Toxicity Study in rats and the Multi-dose Rangefinder in rats.

Test material A177, Hazleton project number 642-365, which was lethal in the 14-Day study when 808 propylene glycol was used as the vehicle, will be retested in place of B207 for the 14-day study only.

Also, we are submitting an additional sample of B198 in order to complete the multi-dose phase of the rangefinder study.

We apologize for any inconvenience this may have caused you.

Sincerely,
J.D. Heck
