Dr. Peter T. Thomas
Senior Toxicologist
IIT Research Institute
10 West 35th Street
Chicago, IL 60616

Dear Dr. Thomas:

We have completed our review of four Immunomodulatory Screening Tests, recently submitted to Lorillard, and have the following comment.

SN45LOR(A76)

Page 9, Paragraph 1, last sentence: This statement is too vague as written. I would agree that an increase in spleen weight could indicate immune modulation; however, the relationship between toxicity and the observed immune response is unclear, as written. Please clarify this statement.

We have also reviewed SN42LOR(B199), SN43LOR(A166), and SN44LOR(A161). These reports are acceptable to us in their present form and can be considered final reports.

Thank you for your attention to these reports. If you have any questions, please feel free to call.

Sincerely,

Thomas A. Villal
Toxicologist, Life Sciences
